TITLE : SLIP SELECTOR

**ABSTRACT :** PROBLEM TO BE SOLVED: To provide a slip selector with which maintainability in the change/ correction of format information can be improved by separately filing the slip data as the format information for one page and the slip definition information defining the slip data of respective pages on series of printed matters.

**SOLUTION:** A slip definition information corresponding to a printer use request is read by a slip definition information file reading part 1-1 and analyzed by a slip definition information analytic part 1-2 and in the case of coming from the outside, the supply of print data for requesting a slip change is responded. In the case of the slip change request and page shift, a print data analytic part 1-3 supplies correspondent slip data information to a slip data change part 1-4 and possesses new slip data. A data sending part 1-5 supplies the slip data and the print data with printing position information supplied from the print data analytic part 1-3 to a printer 5.
